WORK EXPERIENCE

KPMG - Business Analyst II

2023-Present
Orlando, FL

- Implement tax compliance process standards for diverse corporate and partnership projects, ensuring adherence from inception to completion.
- Provide guidance and training to peers, optimizing the use of tax technology, refining processes, and improving the quality of tax deliverables and services.
- Collaborate seamlessly with teams, employing effective communication and collaboration skills to achieve shared goals, maintain high-quality standards, and contribute to overall client service excellence.

KPMG - Business Analyst I

2022-2023

- Analyzed and processed tax and financial data received using KPMG's proprietary tax technology tools to produce tax compliance client deliverables
- Contributed to multiple processes and aspects of tax compliance projects to deliver completed work products within defined timelines and quality control standards
- Created ad hoc reports for senior management to track new changes to tax code across the country, and ensured accurate documentation of project process and findings
- Participated in periodic training and professional development to optimize the use of tax technology and improve the quality of tax deliverables and services provided

Programming Projects

Data Driven Blog using R

- Using real world data from the web, I wrote a report that showed illustrations with plots as well as statistical analysis. Using data from AirBnB, I tested to see if location influenced the price of a listing within New York City.
- GitHub link: <https://github.com/ChristopherRobles/Data-Driven-Blog>

Data Visualization using Tableau

- This visual is based on data from Forbes on top paid athletes over time. The goal was to see how different sports fared on this list across this 31-year span.
- Tableau link: <https://public.tableau.com/app/profile/christopher.robles/viz/EarningsbySports1990-2021/EarningsbySportsBasedonForbesHighPaidAthletes1990-2021>

Google Data Analytics Capstone

- This capstone project put together everything learned throughout Google's Data Analytics Course. I discussed my full process of cleaning, analyzing and visualizing the data, along with my final suggestions.
