Rutgers University - New Brunswick, NJ
B.A. Economics; Business Administration

May 2021
GPA 3.443

WORK EXPERIENCE

KPMG – Associate

2024-Present
Orlando, FL

- Managed cross-functional tasks and coordinated a focused sub-team to ensure timely execution of tax returns and workpaper deliverables across client engagements.
- Analyzed client-provided data using advanced technology to create high-quality tax deliverables for various unique partnership clients, enhancing accuracy and compliance.
- Maintained a commitment to delivering high-quality work efficiently, with a strong focus on continuous improvement and process refinement.
- Designed and led training for 40+ team members on newly implemented tax technology and updated compliance processes, equipping the team to maintain accuracy and efficiency while meeting tight client deadlines.
- Learned and implemented firm-specific technology, serving as the primary resource to relay its functionalities to the team, ensuring seamless adoption and efficiency.

KPMG - Business Analyst II

2023-2024

- Implemented tax compliance process standards for diverse corporate and partnership projects, ensuring adherence from inception to completion
- Provided guidance and training to peers, optimizing the use of tax technology, refining processes, and improving the quality of tax deliverables and services
- Collaborated seamlessly with teams, employing effective communication and collaboration skills to achieve shared goals, maintain high-quality standards, and contribute to overall client service excellence

KPMG - Business Analyst I

2022-2023

- Analyzed and processed tax and financial data received using KPMG's proprietary tax technology tools to produce tax compliance client deliverables standards
- Supported end-to-end tax compliance efforts, ensuring timely submission of deliverables aligned with regulatory and internal benchmarks
- Created ad hoc reports for senior management to track new changes to tax code across the country, and ensured accurate documentation of project process and findings
- Participated in periodic training and professional development to optimize the use of tax technology and improve the quality of tax deliverables and services provided

Programming Projects

Banking Program using Python

- Implemented a comprehensive banking program in Python, demonstrating proficiency in object-oriented programming (OOP). The program simulates banking operations for debit and credit card accounts, allowing users to perform various transactions such as deposits, withdrawals, and purchases.

Google Data Analytics Capstone

- Completed a capstone project summarizing key concepts from Google's Data Analytics Course, including data cleaning and preparation using R, data analysis, and developing an interactive Tableau dashboard with final recommendations.
- GitHub link: <https://github.com/ChristopherRobles/Google-Data-Analytics-Capstone-Project>

Data Driven Blog using R

- Using real world data from the web, I wrote a report that showed illustrations with plots as well as statistical analysis. Using data from AirBnB, I tested to see if location influenced the price of a listing within New York City.
- GitHub link: <https://github.com/ChristopherRobles/Data-Driven-Blog>

Data Visualization using Tableau

- This visual is based on data from Forbes on top paid athletes over time. The goal was to see how different sports fared on this list across this 31-year span.
